## March 2009 Quarterly Report

### Operational Highlights:

Exploration Highlights for the March 2009 Quarter:

- Mt Bevan Iron Ore Project, WA – Drilling recommences
- High grade gold mineralisation confirmed along strike of the Deep South Mine, WA, owned by Saracen Mineral Holdings Limited ('Saracen') – re-sampling of historic drill chips returns 3.0m @ 38.4 g/t Au.
- Drilling at Deep South Project to commence early May
- Assessment update of historic Anglo Saxon gold mineralisation in the South Laverton gold zone, WA
- Resumption of postponed drilling at the Clarke River Uranium Project, Queensland planned

### Introduction

The Hawthorn Resources Limited group of companies ("Hawthorn") is an Australian diversified base metal and gold explorer with significant strategic tenement holdings throughout the Eastern Goldfields of Western Australia, South Australia and Queensland.

Exploration continues to be focused at the Mt Bevan Iron ore project and on the company's prospective and extensive gold tenements in the South Laverton gold zone of Western Australia.

Exploration is also planned to resume at the company's Clarke River uranium project in Queensland in the near future. Several Joint Ventures, operated by strong and committed ASX and TSX listed partners, continue to provide leverage to discovery throughout project areas in both Western Australia and South Australia.

## Mount Bevan Project – Western Australia

Hawthorn Resources 100%

The Mount Bevan Project, is located approximately 100 km west of Leonora in the central Yilgarn of Western Australia. Exploration has identified outcropping and sub-outcropping haematite mineralisation adjacent to magnetite iron formation units and ridge forming BIF's that extend for over 25 kilometres through the entire length of the project area.

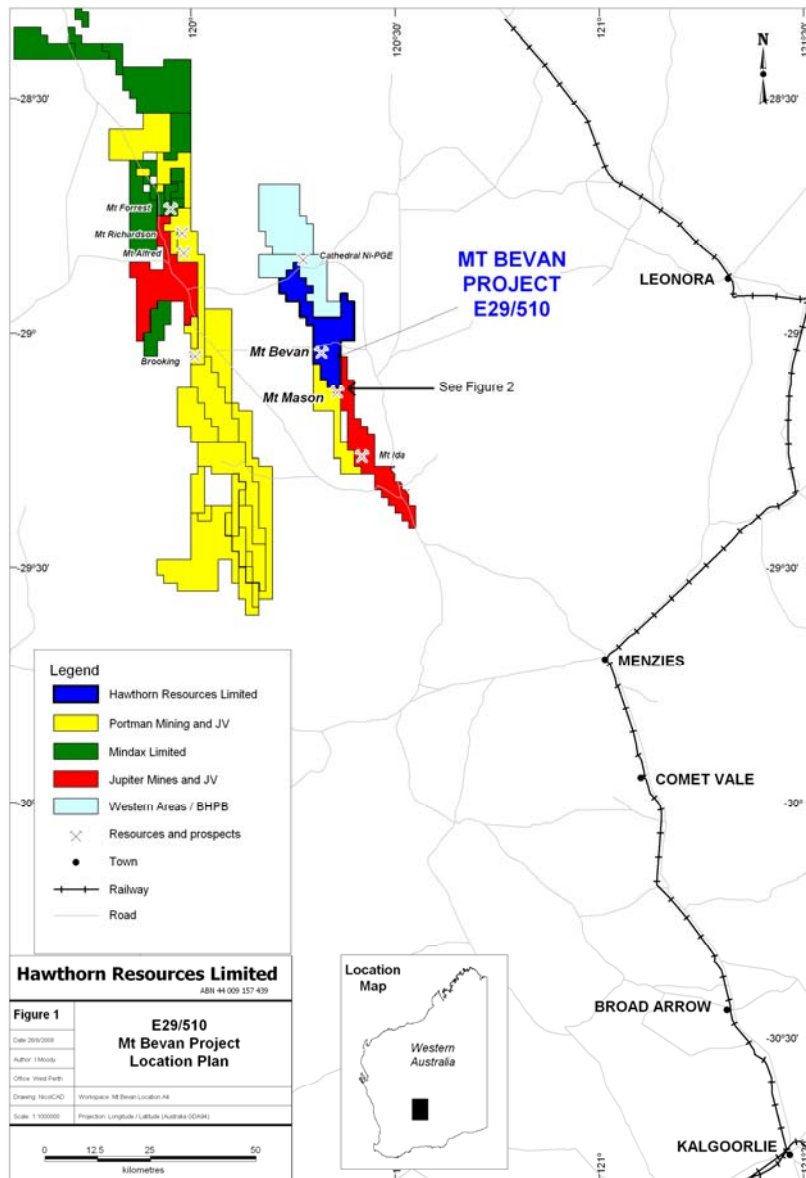

Figure 1. Mt Bevan Area – Location Plan

Initial drilling in the project area has targeted the northerly strike extension of the recently upgraded Mt Mason iron ore resource (5.75 Mt @ 59.9% Fe) held by Jupiter Mines Limited (“Jupiter”), situated immediately to the south of the Mt Bevan project area. Figure 1 and 2.

Geological, geophysical interpretation and drilling suggests that the Mt Mason haematite orebody continues to extend a significant distance both north and eastwards into Hawthorn’s tenement holding. Significant zones of haematite mineralisation have been intersected by Hawthorn immediately along strike of the known resource, with intercepts to 40 m @ 61.7% Fe returned to date. Mineralisation remains both open at depth and to the northeast.

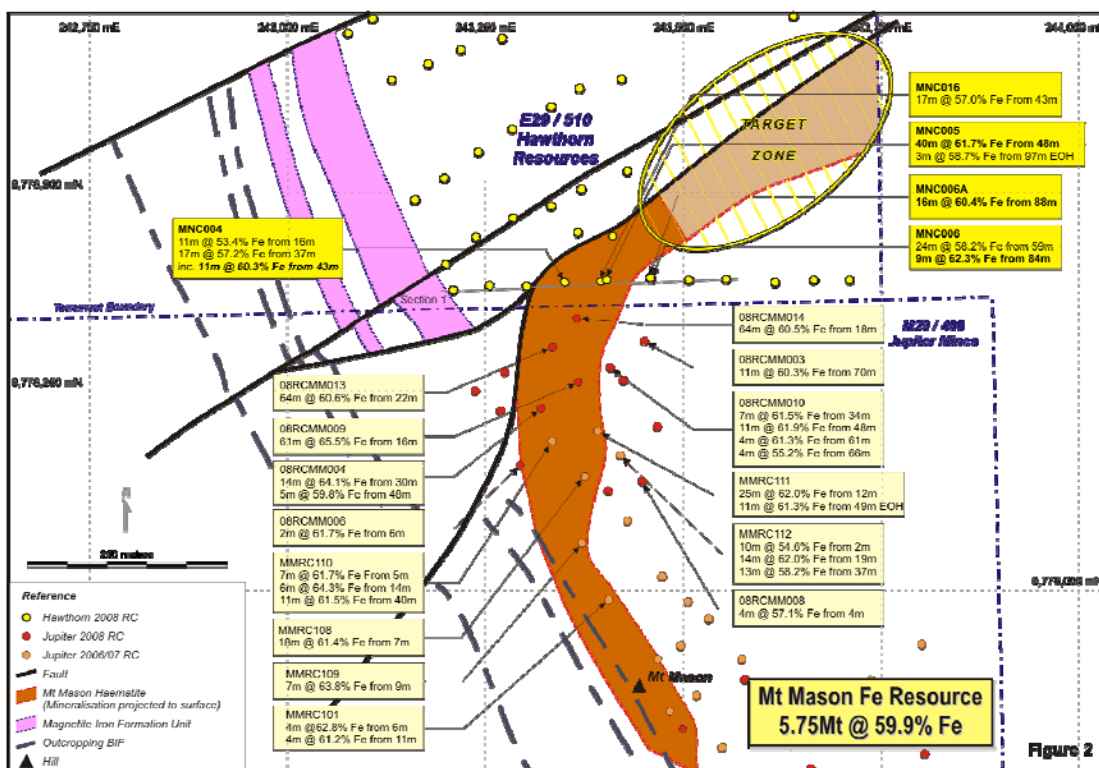

Figure 2. Mt Mason – Location Plan

## **Mount Bevan Project – Western Australia (cont.)**

*Hawthorn Resources 100%*

Corporate activity in the vicinity of the Mt Bevan Iron Ore project area has seen recent joint ventures between Portman Mining Limited and Iron Mountain Mining Limited and Portman Mining and Polaris Metals NL over the Perrinvale – Mt Richardson BIF belt to the west of Mt Bevan.

In addition Jupiter Mines Limited has recently announced that a number of assets held by Red Rock Resources plc and Pallinghurst Resources Australia Limited have been vended into Jupiter. In the Mt Bevan district these assets include tenements in the Mt Ida and Mt Alfred areas and a 10.2% shareholding in Mindax Limited who hold tenements in the Mt Forrest area, 35 km northwest of Mt Bevan. Figure 1

### ***Current Drilling Program – Mt Bevan***

Following re-assessment of existing geophysical and geological data, drilling has resumed at the Mt Bevan project.

The current program is designed to continue testing identified targets capable of hosting substantial haematite resources and to extend the extent of known haematite mineralisation in the southernmost Mt Mason portion of the tenement.

Several new targets with similar geological and geophysical signatures to the Mt Mason haematite orebody have been identified, are to be tested on and within the multiple BIF units known throughout the tenement area.

In addition, while not a primary focus of the current drilling campaign, the location, tenor and dimension of magnetite mineralisation intersected will continue to be assessed. As reported substantial widths of magnetite enriched sediments and BIF's were intersected during drilling completed during late 2008. These intersections appear mostly continuous over the 5.5 km of strike tested to date. Davis Tube testwork has indicated that concentrates produced are both of excellent Fe grade and free of deleterious elements alumina and phosphorus, with initial high silica grades of 40-45% almost entirely stripped from the concentrate. Re-sampling of selected fresh and complete portions of the magnetite iron formation unit will be undertaken to estimate the tonnage and grade potential of the project area.

**South Laverton Gold Exploration – Western Australia incorporating Triumph, Savannah, Yundamindera, Pinjin, and Deep South Projects**

(Hawthorn 100%),(Hawthorn Resources 80%, Avoca Resources 20%),(Hawthorn Resources earning 80%, Great Southern Mines 20%). Figure 3

Hawthorn Resources' South Laverton Gold Exploration Zone incorporates tenements and joint venture held by Hawthorn Resources in the eastern goldfields of Western Australia.

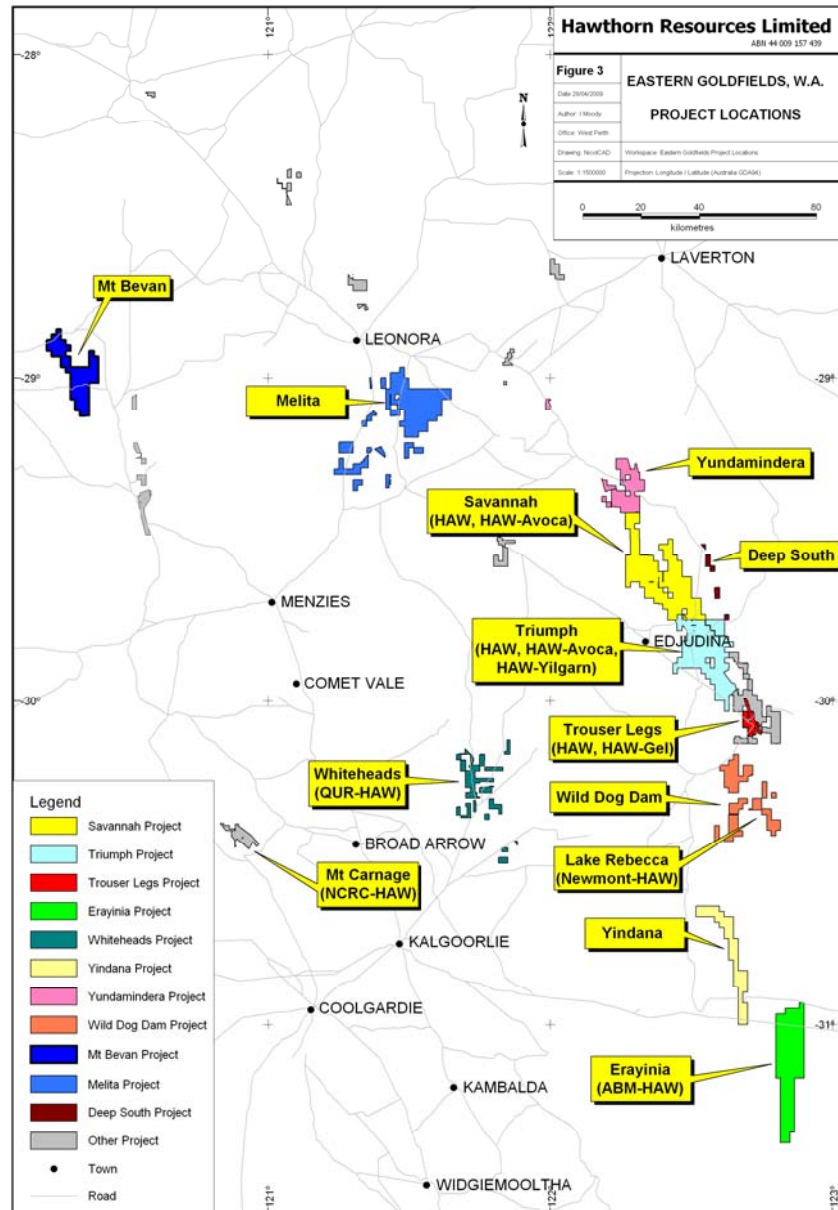

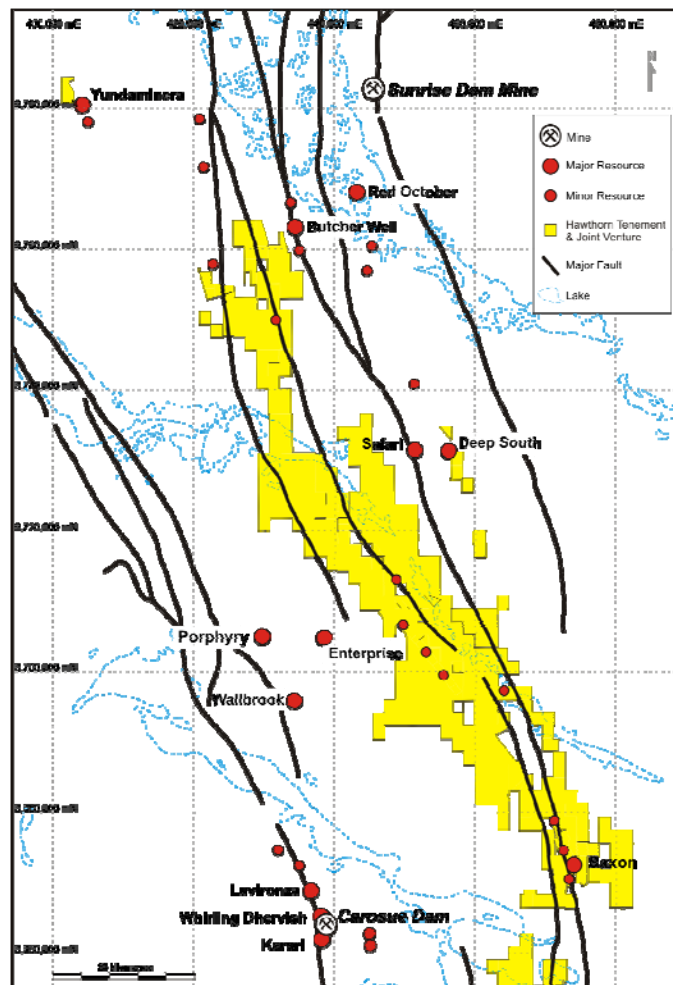

Figure 3 – Eastern Goldfields of Western Australia, Project Locations

The tenement package, of over 1,100 km<sup>2</sup>, extends from the south shore of Lake Carey to the historic Pinjin Mining Centre and is surrounded by a number of major gold mines, deposits and advanced resources including Sunrise Dam, Red October, Carosue Dam, Safari Bore, Deep South and the Porphyry group of deposits. In addition major structural features known to be associated with gold mineralisation throughout the district including the Pinjin and Claypan Dam Faults traverse the tenement package.

*Figure 4. South Laverton Gold Exploration – Gold Deposits and HAW tenements*

With a significant number of the tenements in the project area recently granted, compilation and field assessment of historic soil, auger and RAB drilling is nearing completion. A number of high priority gold targets, with either limited or no drilling to date have been identified and assessed in the field. Confirmation sampling and mapping of these targets commenced during the quarter. Follow-up RAB and RC drilling programs are planned to commence during the June 2009 quarter.

Hawthorn considers this unique tenement package, with substantial existing gold targets requiring limited initial exploration, as a continuing focus for 2009 exploration.

## **Deep South Project – Western Australia**

*(Hawthorn Resources 100% and Hawthorn Resources 80%, Avoca Resources 20%).*

The project area lies directly along strike to the south of the non-operational Deep South Mine approximately 170 km to the north east of Kalgoorlie in Western Australia. The opencut gold mine was operated 2004 and 2005 by Sons of Gwalia and St Barbara Mines Limited.

The mine is currently owned by Saracen and hosts a reported opencut and underground Indicated and Inferred Resource of approximately 196,000 ounces of gold.

Following the grant of tenements in this project area in late 2008, field assessment of geophysical and historic exploration data commenced. Historic exploration in the project area primarily consists of a shallow RAB drilling program completed during 2003, prior to the commencement of mining at the Deep South Mine.

Most holes in this historic RAB program failed to pierce a pervasive cover sequence that extends to between 8 and 20 metres depth from surface throughout the project area.

Such a cover sequence effectively masks geochemical signatures from underlying mineralisation unless adequately drilled to depth. One of the few historic RAB holes to penetrate the cover sequence, LINB049, reported strongly anomalous gold mineralisation. Adjacent RAB drillholes failed to adequately test the mineralised position identified in LINB049 along strike or at depth, with many holes abandoned due to a shallow water table.

Re-sampling by Hawthorn during the quarter has confirmed the presence of high grade gold mineralisation in LINB049 with an interval of 3 metres @ 38.4 g/t Au recovered from 37-40 metres downhole.

This intersection lies within the strike corridor of the Deep South Mine to the north, and is hosted by a chert-quartz-pyrrhotite lode of a similar nature to one of the main lodes known in the Deep South Mine.

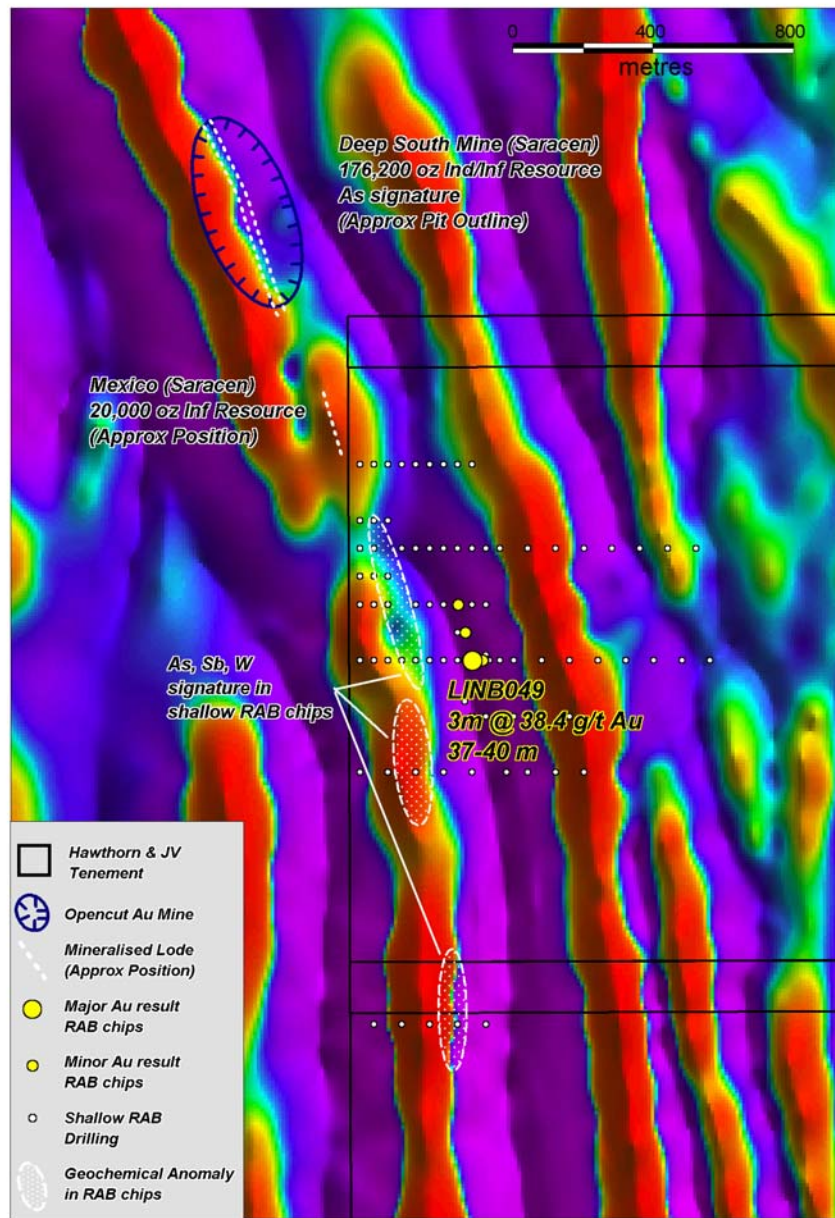

Figure 5. Deep South Project – Northern Section targets on Airborne Magnetics 1.5VD

RC drilling of this target and others identified within the initial 3.2 km of potential strike in the project area will commence during May.

### **Trouser Legs Project – Western Australia**

*Trouser Legs Joint Venture (Hawthorn Resources 70%, Gel Resources 30%) incorporating the Anglo Saxon gold project.*

The Trouser Legs project is located 130 km east of Kalgoorlie and is centred on the historic Pinjin Mining centre.

Re-assessment by Hawthorn and joint venture partner Gel Resources of the economic potential of the gold mineralisation at the historic Anglo Saxon and Saxon Extended Mines has continued during the quarter. This re-assessment has been driven by the sustained strength in both the US and Australian dollar gold price and a renewed focus on the gold exploration portfolio of Hawthorn Resources.

As previously reported a substantial but non-current resource of approximately 150,000 oz of gold was calculated by Hawthorn's precursor company Great Gold Mines NL during 2001 on data collected to that time – a period when the average US \$ gold price was approximately \$300 / ounce.

Programs to renew and upgrade the economic potential of the shallow oxide gold mineralisation in the Anglo Saxon area have been designed, whilst further exploration programs to enhance several smaller, but high grade, mineralised zones throughout the Joint Venture area are planned.

### **Clarke River Uranium Project – Queensland**

*(Northern Resources Australia - 100% owned subsidiary of Hawthorn Resources)*

The drilling program designed to follow up the strongly anomalous U drilling results (to 2 metres @ 0.08% U) in this project area remains to be completed.

The project area, 150 kilometres west of Townsville, Queensland recorded record seasonal rainfall during February 2009, however minimal rainfall was recorded during March.

Early in the upcoming quarter Hawthorn personnel will inspect the project area, repairing washed out access tracks to existing prepared drill pads if required. If re-establishment of tracks is easily achieved drilling is likely to proceed early in the September quarter.

### **Melita Project – Western Australia**

*(Hawthorn 100%). Figure 3*

As reported in the previous quarterly report Regis Resources NL ('Regis') withdrew from the Joint Venture in this project area during December 2008, primarily to focus resources and personnel on their Moolart Well Project in the Duketon district of Western Australia.

Regis undertook geological and geophysical assessment and conducted a comprehensive, project wide, soil sampling campaign during the period of the Joint Venture. This program was primarily focused towards nickel and gold discoveries, with a

number of robust gold-in-soil anomalies identified. No drilling testing of these identified anomalous zones was undertaken.

Hawthorn has, upon receipt of the final exploration data from Regis, carried out on-ground assessment of identified anomalous zones of gold-in-soil mineralisation. RAB drilling programs are proposed and are required to fully test these zones, with such program scheduled for early in the September 2009 quarter.

## **Joint Ventures**

### **Lake Rebecca Joint Venture – Western Australia**

*(Newmont Australia 90%, Hawthorn Resources 10%). Figure 3*

This joint venture between Newmont Australia and Hawthorn Resources covers tenements within the Wild Dog Dam Project area on the southern margin and within Lake Rebecca, Western Australia.

Newmont has been exploring in this area since 2005 targeting palaeochannels at the base of the lake sediments utilising EM and drill testing, following comprehensive heritage and environmental clearance procedures. In August 2008 Newmont reported to Hawthorn that they had expended the stipulated \$ 1 Million dollars in expenditure over a 4 year period to earn 75% equity and that a formal joint venture now existed. Hawthorn elected during the quarter to convert its 25% in the tenement blocks to a 10% free carried interest until decision to mine.

Newmont reports that construction of a detailed PalaeoDTM model of the palaeochannel systems in Lake Rebecca by a Senior Geomorphologist has commenced. This model, utilizing all existing geophysical and geomorphological data in hand, will in part guide future exploration in the Joint Venture area.

### **Erayinia Joint Venture – Western Australia**

*(ABM Resources 70%, Hawthorn Resources 30%). Figure 3*

The Erayinia Joint Venture is centred approximately 130 kilometres south east of Kalgoorlie, Western Australia. The joint venture tenements, comprising of 3 granted Exploration Licences, are managed by ABM Resources NL ("ABM") who have earned 70% equity in the project area by exploration expenditure.

Exploration by ABM Resources from 2005 onwards has confirmed the presence of significant VMS mineralisation at the King prospect with two zinc rich lenses of mineralisation outlined at the King prospect to date. High grade zones of mineralisation extending over a vertical extent of 250 metres and strike extent of at least 60 metres have been identified within an overall zinc mineralised zone of over 600 metres strike. Significant high grade drill intersections (including ED132 of 4m @ 11.5% zinc, ED116 of 5m @ 10.6% zinc and ED144 of 3m @ 7.56% zinc) have been returned from diamond drilling programs completed by ABM to date.

Twenty-five other drill targets have been identified within the project area based on geophysical and geochemical anomalism. Additionally the project is considered prospective for both gold and uranium, with exploration during the March quarter focused on the compilation and analysis of all gold exploration data from within the joint venture area.

**Whiteheads Joint Venture – Western Australia**

*(Quantum Resources 80%, Hawthorn Resources 20%). Figure 3*

Quantum Resources have reported that no work was undertaken on the Whiteheads JV tenements during the quarter.

**East Kimberley Joint Venture – Western Australia**

*(Thundelarra 80%, Hawthorn Resources 20%)*

Thundelarra have reported that no work was undertaken on the Lamboo and Togo JV tenements during the quarter.

**Mt Carulina Joint Venture – Western Australia**

*(Caldera 75%, Hawthorn Resources 25%)*

Caldera have reported that no work was undertaken on the Mt Carulina JV tenement during the quarter.

**Mt. Sarah & Mt. Narlee - South Australia**

*(Caldera 50%, Ellendale 50%, Simbieri earning to 60%)*

Simbieri have reported that no work was undertaken on the Mt Carulina JV tenement during the quarter.

*The information in this report that relates to Exploration Results, Mineral Resources or Ore Reserves is based on information compiled by Mr Ian Moody, who is a member of the Australasian Institute of Mining and Metallurgy and a full time consultant geologist with First Principle Mineral Exploration Company Pty Ltd. Mr Moody has sufficient experience as a geologist which is relevant to the style of mineralization and the type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 edition of the Australasian Code of Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Moody consents to the inclusion in this report of the matters based on his information in the form and context in which it appears. Attached is a copy of the Company's Mining Exploration Entity Quarterly Report in accordance with Listing Rule 5.3.*

Quarter ended ("current quarter")

31 March 2009

### Consolidated statement of cash flows

	Current quarter \$A'000	Year to date (12 months) \$A'000
<b>Cash flows related to operating activities</b>		
1.1 Receipts from product sales and related debtors	-	-
1.2 Payments for (a) exploration and evaluation	(298)	(1,195)
(b) development	-	-
(c) production	-	-
(d) administration	(183)	(790)
1.3 Dividends received	-	-
1.4 Interest and other items of a similar nature received	31	100
1.5 Interest and other costs of finance paid	-	-
1.6 Income taxes paid	-	-
1.7 Other (provide details if material)		
- GST (Refundable)	266	266
<b>Net Operating Cash Flows</b>	<b>(184)</b>	<b>(1,619)</b>
<b>Cash flows related to investing activities</b>		
1.8 Payment for purchases of: (a)prospects	-	-
(b)equity investments	-	-
(c) other fixed assets	-	-
1.9 Proceeds from sale of: (a)prospects	-	-
(b)equity investments	-	-
(c)other fixed assets	-	-
1.10 Loans to other entities	-	-
1.11 Loans repaid by other entities	-	-
1.12 Other (provide details if material)		
<b>Net investing cash flows</b>	<b>-</b>	<b>-</b>
1.13 Total operating and investing cash flows (carried forward)	<b>(184)</b>	<b>(1,619)</b>

+ See chapter 19 for defined terms.

**Appendix 5B**  
**Mining exploration entity quarterly report**

1.13	Total operating and investing cash flows (brought forward)	(184)	(1,619)
<b>Cash flows related to financing activities</b>			
1.14	Proceeds from issues of shares, options, etc.	-	-
1.15	Proceeds from sale of forfeited shares	-	-
1.16	Proceeds from borrowings	-	-
1.17	Repayment of borrowings	-	-
1.18	Dividends paid	-	-
1.19	Other (provide details if material)	-	-
	<b>Net financing cash flows</b>	-	-
	<b>Net increase (decrease) in cash held</b>	(184)	(1,619)
1.20	Cash at beginning of quarter/year to date	2,327	3,762
1.21	Exchange rate adjustments to item 1.20	-	-
1.22	<b>Cash at end of quarter</b>	2,143	2,143

**Payments to directors of the entity and associates of the directors**

**Payments to related entities of the entity and associates of the related entities**

		Current quarter \$A'000
1.23	Aggregate amount of payments to the parties included in item 1.2	198
1.24	Aggregate amount of loans to the parties included in item 1.10	-

1.25 Explanation necessary for an understanding of the transactions

**Non-cash financing and investing activities**

2.1 Details of financing and investing transactions which have had a material effect on consolidated assets and liabilities but did not involve cash flows

2.2 Details of outlays made by other entities to establish or increase their share in projects in which the reporting entity has an interest

**Financing facilities available**

*Add notes as necessary for an understanding of the position.*

+ See chapter 19 for defined terms.

	Amount available \$A'000	Amount used \$A'000

## Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
